## Open Research Data and Open Science

---

### Thomas Bourke

This presentation focuses on how the EUI Library combines research data management support with research data collection development and services. With the growing importance of RDM and Open Data – the Library has pursued a strategy of integrating ‘traditional’ data collection services with ‘new’ research data management services. This combination facilitates integrated support for data discovery; terms and conditions of access and use; data security; dataset metadata and documentation; data repositing, preservation and open data sharing.
