Comunicazione scientifica è …

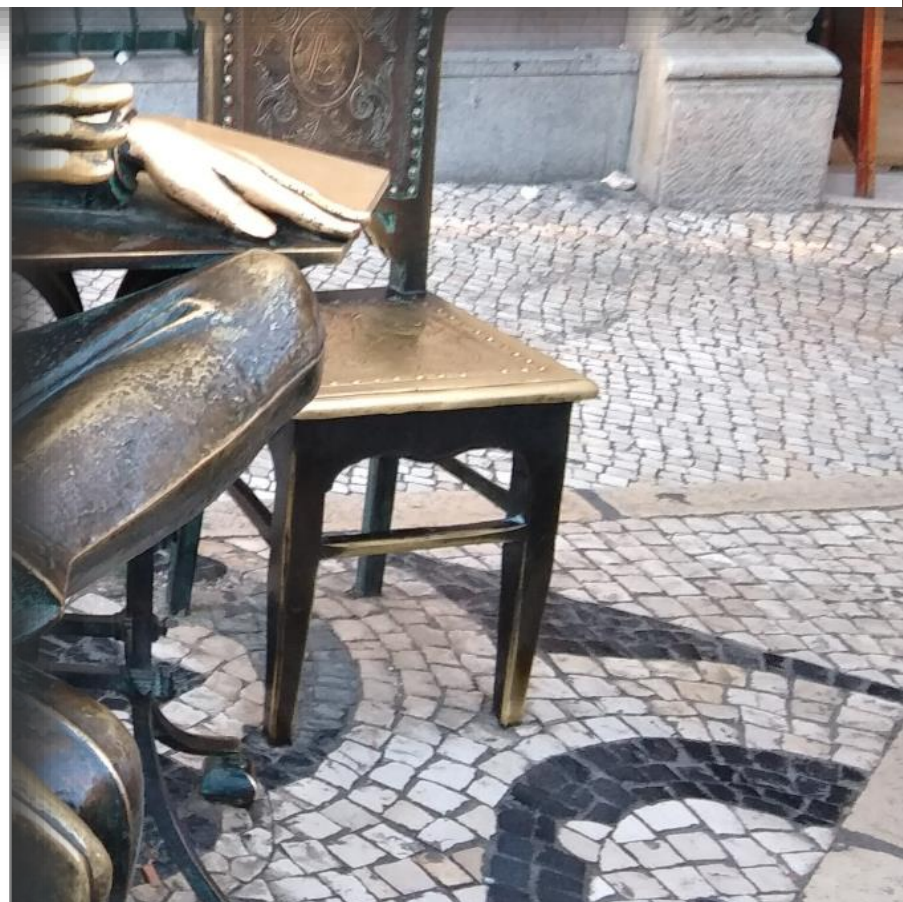

… comunicazione?

For researchers, it's like going to a restaurant, bringing all of your own ingredients, cooking the meal yourself, and then being charged $40 for a waiter to bring it out on a plate for you.

You are the provider, the product, and the consumer.
Jon Tennant, Open Science: just science done right, Sept. 2018

The Scholarly Commons: From Profiteering To Servicing

http://bjoern.brembs.net/2017/10/academic-publishers-profiteering-servicing/

In: Science Politics • Tags: bidding, infrastructure, publishers, services

These days, many academic publishers can be considered mere Pinos: 'Publishers in name only'. Instead of making scholarly work, commonly paid for by the public, public, as the moniker 'publisher' would imply, in about 80% of the cases, they put them behind a paywall. As if that weren't infuriating enough, profits and paywall costs add up such that the final cost to the taxpayer is tenfold higher than if each article were just made, you know, public.

The only reason scholarship is in this embarrassing calamity is historical baggage. Nobody in their right mind would construct scholarly communication in the current way if they had to design it from scratch.

So how would one design our scholarly communication infrastructure from scratch, without historical baggage? To do that, one would have to start by defining the basic functionalities of this infrastructure. Importantly, the infrastructure would have to cover all of scholarships output: our narratives (text, audio, video) as well as our data

… un po' di Zen…

Much of scientific work is made up of **collaboration rather than competition.** Science exhibits the nature of **networks, not that of Olympic games**. **Concern of quality** has been **replaced by an obsession for competition. Competition means "doping"**

Scholarly communication is a distributed process of knowledge creation that requires a great conversation.

Scholarly communication is changing. Two questions:

1) **What will it be like?** The question can be framed in two ways:

The first is the "scriptorium way" when press was invented:

how to adapt the present to the (yet unknown) future.

Open Access debate has followed this path.

The second way, more fundamentally, strongly foregrounds the notion of "scientific communication": **WHAT DOES IT NEED TO WORK BEST?**

- **a set of useful, credible, peers;**
- **"crystals" of knowledge**

2) **Who will control it?**

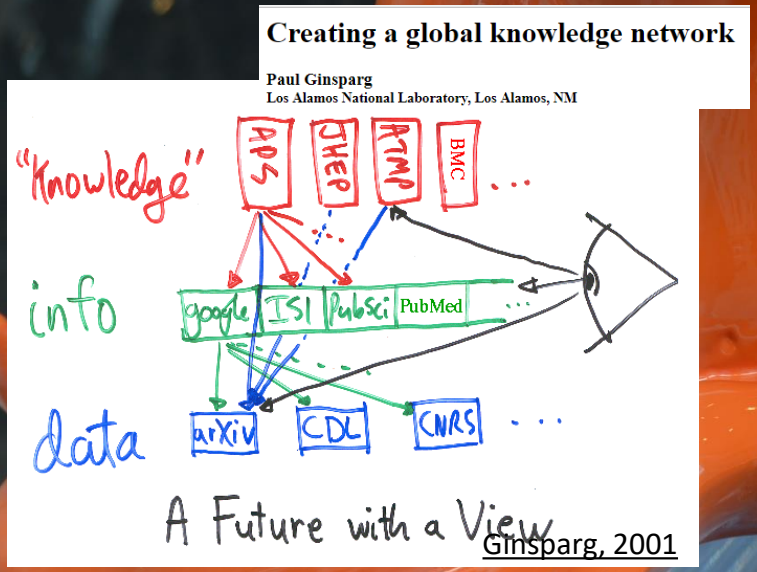

Scholars must regain possession of their own work (and its evaluation)

SKILLS AND SERVICES NEEDED FOR THE GREAT CONVERSATION SHOULD SERVE ITS OBJECTIVES, NOT THE REVERSE.

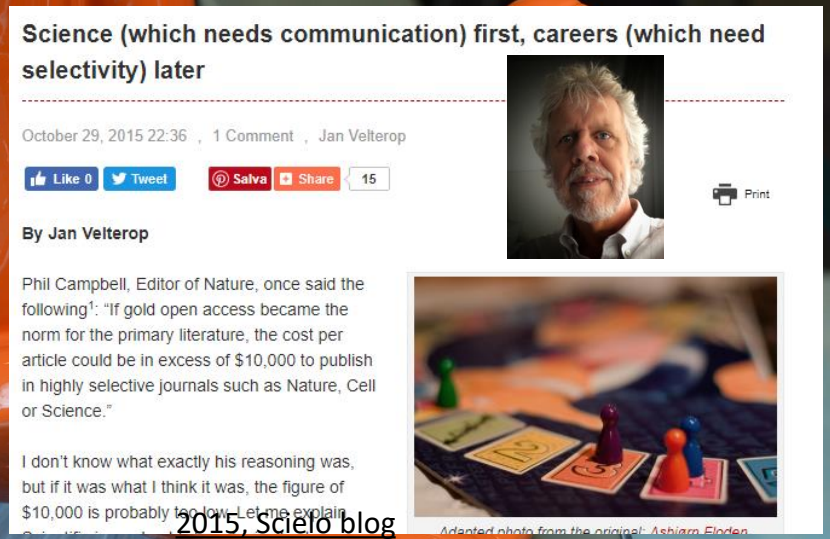

… un po’ di Zen / 2 …

manage visibility, authority and prestige. The question we should ask is *whether the communication system and the reputational system of science and scholarship should be one and the same*[56].

Ginsparg, 2001

2015, Scielo blog

From all that precedes, it becomes obvious that the kind of Open Access really needed should dissociate communication from evaluation. And the dissociation may be easier to achieve if one

ai **risultati** e ai **dati** della ricerca scientifica

The Open Content definition defines five rights[2], also known as the five Rs, that should hold true for a copyrightable work to be truly open:

- **Retain** - the right to make, own, and control copies of the content (eg, download, duplicate, store, and manage)
- **Reuse** - the right to use the content in a wide range of ways (eg, in a class, in a study group, on a website, in a video)
- **Revise** - the right to adapt, adjust, modify, or alter the content itself (eg, translate the content into another language)
- **Remix** - the right to combine the original or revised content with other material to create something new (eg, incorporate the content into a mashup)
- **Redistribute** - the right to share copies of the original content, your revisions, or your remixes with others (eg, give a copy of the content to a friend)

Major Publishers File Second Lawsuit Against ResearchGate

Oct.9, 2018

As the American Chemical Society and Elsevier move litigation forward, other academic publishers have opted to collaborate with the academic network platform instead.

Oct 9, 2018
DIANA KWON

144 129

ResearchGate, a popular networking platform where scientists can post their published work, has a complicated relationship with academic publishers. A number of them have accused the site of illicitly disseminating copyrighted work, and two of these—Elsevier and the American Chemical Society—filed a lawsuit in Germany last year to try to force ResearchGate to change its practices.

1. Introduction

Arsenic (As) is a toxic element, frequently found in soils and water. A main natural source of As is the erosion of mother rock, even though a consistent part of As environmental pollution comes from human activities (Meharg and Hartley-Whitaker, 2002 and Patra et al., 2004). The As in unpolluted fresh water is usually in the range 1–10 μg/l. According to EPA and WHO, the maximum permissible As concentration in drinking water is 50 μg/l (Mandal and Suzuki, 2002).

Arsenic is a well-established human carcinogen (Qin et al., 2008a) and has been shown to be genotoxic in a variety of *in vitro* studies (Hughes, 2002). In plants, it severely affects growth and development, and its toxicity is strongly dependent on the concentration, exposure time and physiological state of the plant (Singh et al., 2007). However, plants vary in their sensitivity to As, and a wide range of species have been identified in As-contaminated soils (Meharg and Hartley-Whitaker, 2002). Besides, hyperaccumulators such as *Pteris vittata*, which tolerate high internal As content, may also use this As to defence themselves against herbivore attack (Mathews et al., 2009).

Higher plants take up As mainly as arsenate (V), the dominant form of phytoavailable As in aerobic soils. According to Meharg and Hartley-Whitaker (2002), As competes with phosphate for plant phosphate transporters. Upon absorption, most arsenate is rapidly reduced to arsenite (III), due to an arsenate reductase activity (Xu et al., 2007), hence, the arsenate cytoplasmic concentration is generally not high enough to exert toxicity (Meharg and Hartley-Whitaker, 2002). Both As species interfere with various metabolic pathways: arsenate, as an analogous chemical to phosphate, may replace phosphate in the ATP and in various

ABSTRACT

Arsenic (As) is one of the most toxic pollutants in the environment, where it severely affects both animal and plant growth. Despite the growing literature data on As effects on plant development, alterations induced by this element on meristem activity of the root have not been explored to any great extent. In the present study, short-term experiments with arsenate have been conducted on *Pisum sativum* L. seedlings to assess whether plant growth impairment is due to DNA/chromosome or mitotic microtubule damages. Root growth was studied by evaluating apical meristem activity and cell elongation. Mitotic aberrations, DNA fragmentation and microtubule organization of the apical cells were also analyzed. The results have shown that arsenate, at the lowest concentration (0.25 μM), slightly increases root growth and some related parameters, whilst the other concentrations have a dose-dependent negative effect on root growth, on the mitotic and labelling index (after bromo-deoxyuridine administration), and on the mitotic arrays of microtubule (through immunofluorescence). The main effects on mitosis occurred for 25 μM As. The percentage of metaphases increased, as did the irregular metaphases and c-mitoses. This was related to alterations in the mitotic spindles, which closely resemble those induced by colchicine. Chromosome breaks and ana/telophase bridges were virtually absent, whilst DNA fragmentation only increased from 25 μM arsenate onwards. These data point to a poor clastogenetic activity of As and implicate that microtubules are one of the main targets of As.

1. Introduction

Arsenic (As) is a toxic element, frequently found in soils and water. A main natural source of As is the erosion of mother rock, even though a consistent part of As environmental pollution comes from human activities (Meharg and Hartley-Whitaker, 2002; Patra et al., 2004). The As in unpolluted fresh water is usually in the range 1–10 μg/l. According to EPA and WHO, the maximum permissible As concentration in drinking water is 50 μg/l (Mandal and Suzuki, 2002).

Arsenic is a well-established human carcinogen (Qin et al., 2008a) and has been shown to be genotoxic in a variety of *in vitro* studies (Hughes, 2002). In plants, it severely affects growth and development, and its toxicity is strongly dependent on the concentration, exposure time and physiological state of the plant (Singh et al., 2007). However, plants vary in their sensitivity to As, and a wide range of species have been identified in As-contaminated soils (Meharg and Hartley-Whitaker, 2002). Besides, hyperaccumulators such as *Pteris vittata*, which tolerate high internal As content, may also use this As to defence themselves against herbivore attack (Mathews et al., 2009).

Higher plants take up As mainly as arsenate (V), the dominant form of phytoavailable As in aerobic soils. According to Meharg and Hartley-Whitaker (2002), As competes with phosphate for plant phosphate transporters. Upon absorption, most arsenate is rapidly reduced to arsenite (III), due to an arsenate reductase activity (Xu et al., 2007), hence, the arsenate cytoplasmic concentration is generally not high enough to exert toxicity (Meharg and Hartley-Whitaker, 2002). Both As species interfere with various metabolic pathways: arsenate, as an analogous chemical to phosphate, may replace phosphate in the ATP and in various phosphorylation reactions, leading to the disruption of the energy flow in cells. The toxicity of arsenite is mainly ascribed to its reaction with sulphydril groups of proteins that interfere with their functions (Meharg and Hartley-Whitaker, 2002; Patra et al., 2004).

Exposure to high concentrations of As induces the production of reactive oxygen species (ROS) (Singh et al., 2007; Wang et al., 2007; Lin et al., 2008; Shri et al., 2009) and the conversion of arsenate to arsenite is regarded as one of the causes of ROS generation (Wang et al., 2007). Oxidative stress induced by As can damage cells, mainly through lipid peroxidation of membranes (Singh et al., 2007) and DNA fragmentation, as has been demonstrated in leaves and roots

Accesso aperto ibrido e no: perché pagare due volte per la stessa cosa?

Pubblicato il 3 ottobre 2018, aggiornato il 3 ottobre 2018 da Maria Chiara Pievatolo

L'Associazione Italiana per la promozione della Scienza Aperta desidera richiamare l'attenzione di ricercatori, studenti, bibliotecari e amministratori di università ed enti di ricerca su un aspetto del contratto CARE con l'editore Elsevier relativo al periodo 2018-2022, il cosiddetto "Pilot Open Access Gold".

CARE è un consorzio che fa capo alla Conferenza dei Rettori delle Università Italiane: il suo compito, secondo una strategia pensata quasi vent'anni fa, è negoziare contratti collettivi modulari ai quali le singole istituzioni possono selettivamente aderire, di modo che nessuna biblioteca di ricerca italiana si trovi a confrontarsi da sola, in merito ai prezzi degli abbonamenti alle riviste, con gli oligopolisti mondiali dell'editoria scientifica.

Il contratto CRUI-CARE, destinato a restare in vigore cinque anni, oltre a regolare gli abbonamenti alla piattaforma Science Direct, propone degli sconti sui cosiddetti *article processing charges* (APC). Questa seconda opzione permette agli autori di rendere i propri articoli usciti sulle riviste Elsevier immediatamente disponibili a tutti, a prezzo di un esborso ulteriore rispetto a quello dell'abbonamento. Abbonamento e APC non sono dunque reciprocamente alternativi: una singola università, a proposito di una medesima rivista, può sottoscrivere un abbonamento e pagare degli APC.

Elsevier, adottando questo modello ibrido, può farsi pagare l'accesso ai testi sia dal lato del lettore, sotto forma di abbonamento, sia dal lato dell'autore, sotto forma di APC. In quanto autori e lettori fanno capo a un medesimo ente,

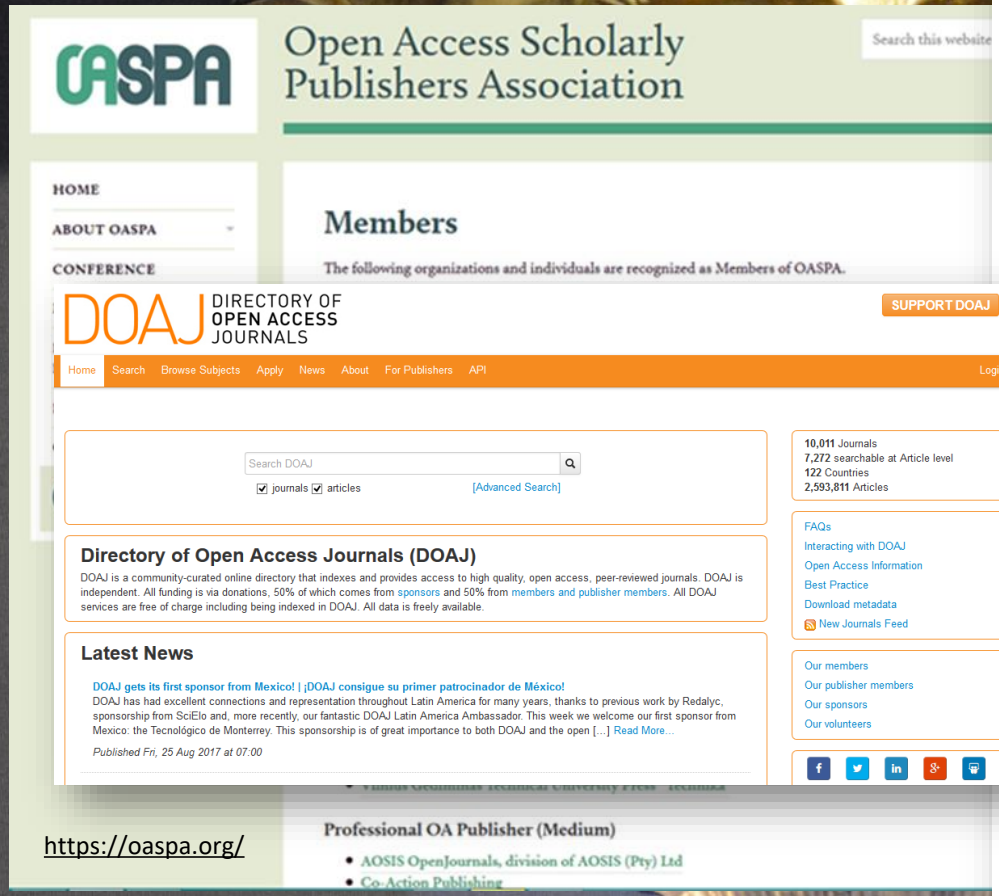

pagando 3000 $,
UN SINGOLO articolo viene reso Open Access,
mentre la rivista resta IN ABBONAMENTO

di fatto, paghiamo due volte…

FOAA
Fair Open Access Alliance

The Fair Open Access Principles

1. The journal has a transparent ownership structure, and is controlled by and responsive to the scholarly community.
2. Authors of articles in the journal retain copyright.
3. All articles are published open access and an explicit open access licence is used.
4. Submission and publication is not conditional in any way on the payment of a fee from the author or its employing institution, or on membership of an institution or society.
5. Any fees paid on behalf of the journal to publishers are low, transparent, and in proportion to the work carried out.

The mission of the foundation is

a. to promote and support initiatives concerning (Fair) Open Access publications in the broadest sense;
b. to acquire resources and financially sustain (Fair) Open Access publications;
c. to support foundations financially and otherwise in various disciplines (xxxOA's) that pursue the same goals;
d. to expand the Open Library of Humanities to other disciplines.
e. to propagate and promote the principles of Fair Open Access over all disciplines of science.

Why Academic Journals Need To Go

In: Science Politics • Tags: decentralized, infrastructure, journals, standards

Jan. 2018

In his fantastic Peters Memorial Lecture on occasion of receiving CNI's Paul Evan Peters award, Herbert Van de Sompel of Los Alamos National Laboratory described my calls to

Coincidentally, journal subscriptions also usurp most of the funds required for implementing Herbert's solutions – the round wheels. Canceling subscriptions hence serves two main purposes: removing the main obstacle for scholars using modern information technology and freeing up funds to implement said technology: removing the square wheels and replacing them with round wheels. Subscription journals are the keystone in the current scholarly communication arch: remove them and it all falls apart. Any journal-like functionality that scholars value is easily recreated with modern technology, but with new functionalities and few, if any, of the current disadvantages and unintended consequences.

This common infrastructure can be defined broadly but it would include at least contributions to:

1. Open source software projects that support the open scholarly commons. This would include projects like DSpace, Fedora, Hyku, the Open Journal System, ArchivesSpace or Islandora.
2. Disciplinary repositories such as ArXiv, bioRxiv, or the Humanities Commons.
3. Large repositories of open content such as HathiTrust or the Internet Archive.
4. Tools from Wikipedia to VIVO to the Open Access Button or Unpaywall.
5. Preservation organizations such as the Digital Preservation Network or the Academic Preservation Trust.
6. Open educational resources such as OpenStax.
7. Organizations that support these developments such as DuraSpace, the Center for Open Science, the Public Knowledge Project, the Open Textbook Ne… or Creative Commons.
8. Advocacy organizations such as SPARC.

PRESS RELEASE

In 2018, French researchers will no longer have access to Springer Nature journals: the consortium Couperin.org is not renewing the previous national agreement with this publisher.

Researchers from institutions and universities in France will no longer have subscriptions to Springer journals. Access that had been granted to this point will be eliminated on April 1, according to the publisher.

Accesso aperto ibrido e no: perché pagare due volte per la stessa cosa?

Pubblicato il 3 ottobre 2018, aggiornato il 3 ottobre 2018 da Maria Chiara Pievatolo

L'Associazione Italiana per la promozione della Scienza Aperta desidera richiamare l'attenzione di ricercatori, studenti, bibliotecari e amministratori di università ed enti di ricerca su un aspetto del contratto CARE con l'editore Elsevier relativo al periodo 2018-2022, il cosiddetto "Pilot Open Access Gold".

CARE è un consorzio che fa capo alla Conferenza dei Rettori delle Università Italiane: il suo compito, secondo una strategia pensata quasi vent'anni fa, è negoziare contratti collettivi modulari ai quali le singole istituzioni possono selettivamente aderire, di modo che nessuna biblioteca di ricerca italiana si trovi a confrontarsi da sola, in merito ai prezzi degli abbonamenti alle riviste, con gli oligopolisti mondiali dell'editoria scientifica.

Il contratto CRUI-CARE, destinato a restare in vigore cinque anni, oltre a regolare gli abbonamenti alla piattaforma Science Direct, propone degli sconti sui cosiddetti *article processing charges* (APC) [illegible] permette agli autori di rendere i propri articoli usciti sulle riviste Elsevier immediatamente disponibili a tutti, a prezzo di un esborso

Staging the Open Access Transformation of Subscription Journals | Berlin, 8–9 December 2015

- Please note: the 12th Berlin Conference is by invitation only -

The 12th conference in the Berlin Open Access series will be an invitation-only workshop for high-level representatives of the world's most eminent research organizations. Delegates will convene in Berlin to discuss how the goal of Open Access can be realized more rapidly.

The central theme will be the transformation of subscription journals to Open Access, as outlined in a recent white paper by the Max Planck Digital Library (http://dx.doi.org/10.17617/1.3).

Plan S Sept. 4, 2018

Accelerating the transition to full and immediate Open Access to scientific publications

The key principle is as follo

"After 1 January 2020 scientific publication by national and European research coun Access Journals or on compliant Open Acc

IN ADDITION:

- Authors retain copyright of their publication with no restrictions. All publications must be published under an open license, preferably the Creative Commons Attribution Licence CC BY. In all cases, the license applied should fulfil the requirements defined by the Berlin Declaration;
- The Funders will ensure jointly the establishment of robust criteria and requirements for the services hat compliant high quality Open Access journals and pen Access platforms must provide;
- case such high quality Open Access journals or latforms do not yet exist, the Funders will, in a ordinated way, provide incentives to establish and upport them when appropriate; support will also e provided for Open Access infrastructures where ecessary;
- Where applicable, Open Access publication fees re covered by the Funders or universities, not by ndividual researchers; it is acknowledged that all cientists should be able to publish their work Open ccess even if their institutions have limited means;
- When Open Access publication fees are applied, their funding is standardised and capped (across Europe);
- The Funders will ask universities, research organisations, and libraries to align their policies and strategies, notably to ensure transparency;
- The above principles shall apply to all types of scholarly publications, but it is understood that the timeline to achieve Open Access for monographs and books may be longer than 1 January 2020;
- The importance of open archives and repositories for hosting research outputs is acknowledged because of their long-term archiving function and their potential for editorial innovation;
- The 'hybrid' model of publishing is not compliant with the above principles;
- The Funders will monitor compliance and sanction non-co

PlanS - cOAlitionS

Science Without Publication Paywalls Sept. 4, 2018
a Preamble to:

cOAlition S for the Realisation of Full and Immediate Open Access

Publication paywalls are withholding a substantial amount of research results from a large fraction of the scientific community and from society as a whole. This constitutes an absolute anomaly, which hinders the scientific enterprise in its very foundations and hampers its uptake by society. Monetising the access to new and existing research results is profoundly at odds with the ethos of science. There is no longer any justification for this state of affairs to prevail and the subscription-based model of scientific publishing, including its so-called 'hybrid' variants, should therefore be terminated. In the 21st century, science publishers should provide a service to help researchers disseminate their results. They may be paid fair value for the services they are providing, but **no science should be locked behind paywalls!**

- chiudere dietro abbonamento significa nascondere risultati alla comunità scientifica e alla società
- MONETIZZARE L'ACCESSO VA CONTRO L'ETICA DELLA SCIENZA
- giusto pagare un servizio ma la scienza non deve essere chiusa dietro un abbonamento

PlanS - cOAlitionS

Science Without Publication Paywalls Sept. 4, 2018
a Preamble to:

cOAlition S for the Realisation of Full and Immediate Open Access

We recognise that researchers need to be given a maximum of freedom to choose the proper venue for publishing their results and that in some jurisdictions this freedom may be covered by a legal or constitutional protection. However, our collective duty of care is for the science system researchers must realise that they are doing a gross disservice to the institution of science if they continue to report their outcomes in publications that will be locked behind paywalls.

We also understand that researchers may be driven to do so by a misdirected reward system which puts emphasis on the wrong indicators (*e.g.* journal impact factor). We therefore commit to fundamentally revise the incentive and reward system of science, using the San Francisco Declaration on Research Assessment (DORA)[4] as a starting point.

- chiudere i risultati dietro abbonamento significa RENDERE UN GROSSO DISSERVIZIO ALLA SCIENZA

- GLI AUTORI POSSONO ESSERE SPINTI A FARLO DA UN SISTEMA DI INCENTIVI **FUORVIANTE** CHE SI BASA SU INDICATORI SCORRETTI (IMPACT FACTOR)

Letters

Fri 14 Sep 2018 17.07 BST

Sept. 14, 2018

Last week, a consortium of European funders, including major research agencies in the UK, France, the Netherlands and Italy, published their "Plan S". It insists that, from 2020, research we have already paid for through our taxes will no longer be locked up. Any researcher receiving money from these funders must publish her or his work only in open-access journals.

The publishers have gone ballistic. Springer Nature argues that this plan "potentially undermines the whole research publishing system". Yes, that's the point. The publishers of the Science series maintain that it would "disrupt scholarly communications, be a disservice to researchers, and impinge academic freedom". Elsevier says, "If you think information shouldn't cost anything, go to Wikipedia", inadvertently reminding us of what happened to the commercial encyclopedias.

Plan S is not perfect, but this should be the beginning of the end of Maxwell's outrageous legacy. In the meantime, as a matter of principle, do not pay a penny to read an academic article. The ethical choice is to read the stolen material published by Sci-Hub.

...oppure, rendete aperta la vostra ricerca depositando. Poi c'è Unpaywall

Promoting innovation and reducing inequity in scholarship: Europe's Plan S for Open Science

Catriona MacCallum September 11th, 2018

Science works best when research is open

The only thing we can know for certain about the future is that if we want to promote innovation, this future doesn't – and shouldn't – include subscriptions or paywalls to basic research articles.

Promoting innovation

By coincidence, a film documentary, Paywall: the Business of Scholarship, was also released last week. Produced and directed by Jason Schmitt and funded by Open Society Foundations, it consists of interviews with librarians, publishers, Open Access

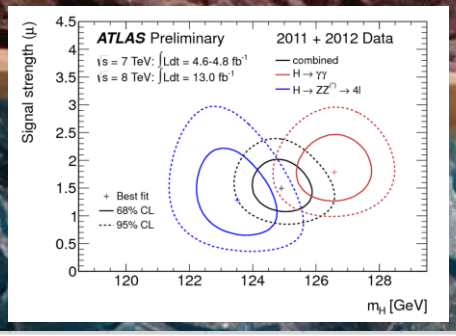

Somewhat disingenuously, many of the publishers objecting to Plan S have stated that authors will no longer have freedom of choice, often considered a fundamental academic right (and enshrined in European law). But as Stephen Curry noted in a recent talk at the inaugural workshop on open citations in Bologna, freedom of choice does not mean freedom from responsibility. And it is not just researchers who have a responsibility, but all the stakeholders involved in the dissemination and evaluation of research, including researchers, institutions, funders, and publishers. In Plan S, the funders go on to acknowledge that researchers may currently be driven to put their work behind paywalls "by a misdirected reward system which puts emphasis on the wrong indicators (e.g. journal impact factor)." And this I think leads to the other most important point of Plan S, their commitment "to fundamentally revise the incentive and reward system of science, using the San Francisco Declaration on Research Assessment (DORA) as a starting point".

Plan S is disruptive – this is not business as usual. That is why it is so important.

Does High Public Debt Consistently Stifle Economic Growth? A Critique of Reinhart and Rogoff

Thomas Herndon* Michael Ash Robert Pollin

April 15, 2013

Herndon, 2013

JEL CODES: E60, E62, E65

Abstract

We replicate Reinhart and Rogoff (2010a and 2010b) and find that coding errors, selective exclusion of available data, and unconventional weighting of summary statistics lead to serious errors that inaccurately represent the relationship between public debt and GDP growth among 20 advanced economies in the post-war period. Our finding is that when properly calculated, the average real GDP growth rate for countries carrying a public-debt-to-GDP ratio of over 90 percent is actually 2.2 percent, not −0.1 percent as published in Reinhart and Rogoff. That is, contrary to RR, average GDP growth at public debt/GDP ratios over 90 percent is not dramatically different than when debt/GDP ratios are lower.

We also show how the relationship between public debt and GDP growth varies significantly by time period and country. Overall, the evidence we review contradicts Reinhart and Rogoff's claim to have identified an important stylized fact, that public debt loads greater than 90 percent of GDP consistently reduce GDP growth.

FAIR Data Action Plan

DATA

The core bits

At its most basic level, data is a bitstream or binary sequence. For data to have meaning and to be FAIR, it needs to be represented in standard formats and be accompanied by Persistent Identifiers (PIDs), metadata and code. These layers of meaning enrich the data and enable reuse.

IDENTIFIERS

Persistent and unique (PIDs)

Data should be assigned a unique and persistent identifier such as a DOI or URN. This enables stable links to the object and supports citation and reuse to be tracked. Identifiers should also be applied to other related concepts such as the data authors (ORCIDs), projects (RAIDs), funders and associated research resources (RRIDs).

STANDARDS & CODE

Open, documented formats

Data should be represented in common and ideally open file formats. This enables others to reuse the data as the format is in widespread use and software is available to read the files. Open and well-documented formats are easier to preserve. Data also need to be accompanied by the code use to process and analyse the data.

METADATA

Contextual documentation

In order for data to be assessable and reusable, it should be accompanied by sufficient metadata and documentation. Basic metadata will enable data discovery, but much richer information and provenance is required to understand how, why, when and by whom the data were created. To enable the broadest reuse, data should be accompanied by a 'plurality of relevant attributes' and a clear and accessible data usage license.

The Jupyter Notebook

The Jupyter Notebook is an open-source web application that allows you to create and share documents that contain live code, equations, visualizations and narrative text. Uses include: data cleaning and transformation, numerical simulation, statistical modeling, data visualization, machine learning, and much more.

Try it in your browser | Install the Notebook

…può richiedere tempo le prime volte… ma poi, oltre ad avere tutto tracciabile e riproducibile, di fatto si ha l'articolo pronto

R = Reusable. Licenze

https://www.slideshare.net/simonealiprandi/il-licensing-di-dati-e-le-principali-licenze-open-data

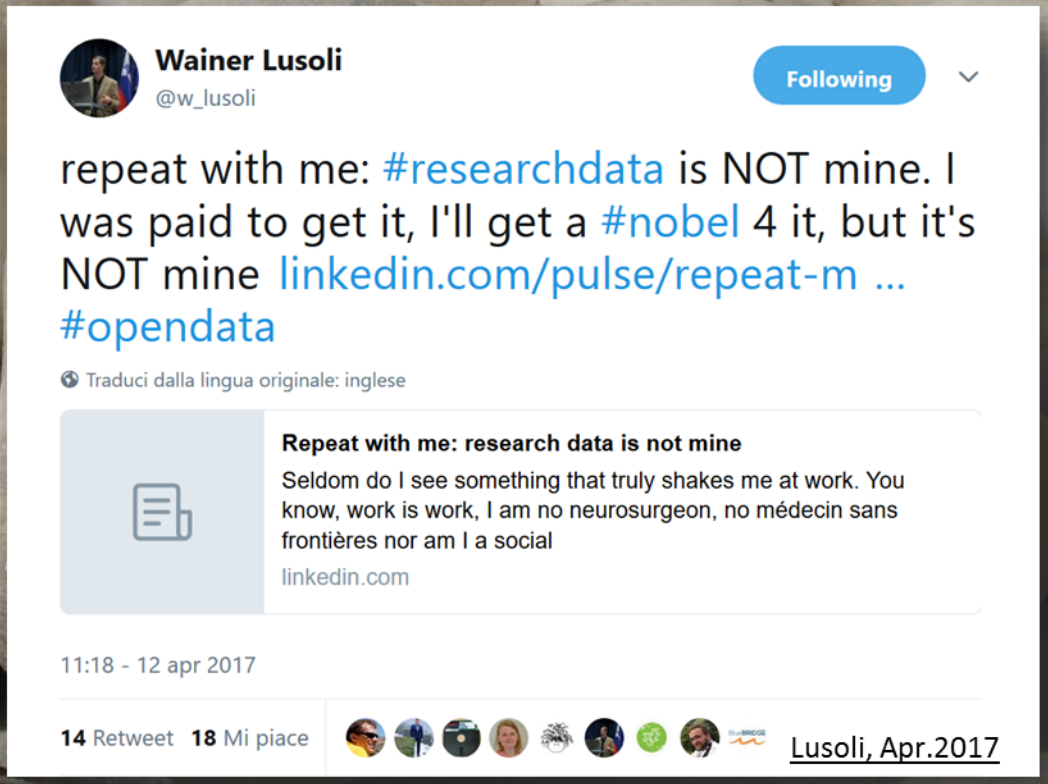

DCC because good research needs good data

How to License Research Data

This guide will help you decide how to apply a licence to your research data, and which licence would be most suitable. It should provide you with an awareness of why licensing data is important, the impact licences have on future research, and the potential pitfalls to avoid. It concentrates on the UK context, though some aspects apply internationally; it does not, however, provide legal advice. The guide should interest both the principal investigators and researchers responsible for the data, and those who provide access to them through a data centre, repository or archive.

GDPR: What researchers need to know

by Guest Author on 16 April 2018

The EU General Data Protection Regulation (GDPR) and new Data Protection Act come into force on 25 May. Both apply in the UK and will influence research involving personal data. So what's changing and how should you, as a researcher, prepare? ***Sarah Dickson****, Head of the MRC Regulatory Support Centre, is here to help.*

Regulatory Support Centre

What is GDPR?

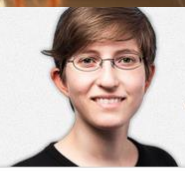

The EU General Data Protection Regulation (GDPR), along with the new UK Data Protection Act, will govern the processing (holding or using) of personal data in the UK.

Although the new regulations haven't been designed specifically for research, we'll need to make some changes to research practice. The Information Commissioner's Office (ICO) is the UK regulator. The Health Research Authority (HRA), in collaboration, is providing official guidance for people working in health and social care research. We're working with both organisations.

What counts as 'personal data'?

This is data about living people from which they can be identified. As well as data containing obvious

Bibliometrics: The Leiden Manifesto for research metrics

1. La valutazione quantitativa deve supportare il giudizio qualitativo
2. Misurare le prestazioni in relazione alla missione di ricerca dell'istituzione, del gruppo o del ricercatore
3. Salvaguardare l'eccellenza nella specifica ricerca locale
4. Mantenere aperto, trasparente e semplice il processo di acquisizione dei dati e quello di analisi
5. Consentire ai valutati di verificare i dati e l'analisi
6. Tenere conto delle differenze tra aree disciplinari nelle pratiche di pubblicazione e citazione
7. Basare la valutazione dei singoli ricercatori su un giudizio qualitativo del loro portafoglio scientifico
8. Evitare finta concretezza e falsa precisione
9. Riconoscere gli effetti sistemici della valutazione e degli indicatori
10. Verificare regolarmente la qualità degli indicatori ed aggiornarli

SPARC Europe

Better ways to evaluate research and researchers

A SPARC Europe BRIEFING PAPER

"We may say, by the way, that success is a hideous thing. Its counterfeit of merit deceives people [...] Prosperity supposes capacity. Win in the lottery, and you are an able man."

— Victor Hugo[1]

Measure what you want to improve

The problems are caused by short-cuts used to assess the quality of research and researchers. For example, the impact factor of the journal where a study is published is often used as a proxy for the quality of the research and therefore of the researcher. Even if journal impact factor were a good proxy, this practice would be harmful because rational researchers optimise their behaviour according to the criteria of evaluation. For this reason, some workers can invest as much effort in chasing publication in high-impact-factor journals as they do on their actual research. From the perspective of the broader goal of research – improving society – this effort is literally wasted. How can we do better?

Ideally, we would evaluate each work on its own merits, taking into account expert opinions, and ignoring numeric metrics. These after all are only proxies for the things we really care about: rigour, correctness, replicability, honesty.

Ideally, we would evaluate each work on its merits, taking into account expert opinions, ignoring numeric metrics.

In practice, this is simply not possible. For logistical reasons, metrics *are* going to be used whether they are good for the

the formula would be:

$1 = k_1 \cdot x_1^{e1} + k_2 \cdot x_2^{e2} + \ldots + k_n \cdot x_n^{e}$n

osing the parameters for the Less Wrong Metric

should the parameters for this general formula be chosen? One approach would be to start with ective assessments of the scores of a body of researchers – perhaps derived from the faculty of a ersity confidentially assessing each other. Given a good-sized set of such assessments, together with the vn values of the metrics $x_1, x_2 \ldots x_n$ for each researcher, techniques such as simulated annealing can be to derive the values of the parameters $k_1, k_2 \ldots k_n$ and $e_1, e_2 \ldots e_n$ that yield an LWM formula best hing the subjective assessments.

re the results of such an exercise yield a formula whose results seem subjectively wrong, this might flag ed to add new metrics to the LWM formula: for example, a researcher might be more highly regarded her LWM score indicates because of her fine record of supervising doctoral students who go on to do indicating that some measure of this quality should be included in the LWM calculation.

workshop

altmetrics17 workshop
Toronto • 26 September 2017

A Comprehensive Assessment of Impact with Article-Level Metrics (ALMs)

ALMs are quantifiable measures that document the many ways in which both scientists and the general public engage with published research.

Traditional metrics, which consider only citation count and journal name to assess impact, capture a narrow view of a work's value and do so only after the accumulation of citations in academic literature.

https://www.plos.org/article-level-metrics

The power of ALMs lies in their ability to:

- ASSESS IMPACT BEFORE THE ACCRUAL OF ACADEMIC CITATIONS
- INCORPORATE BOTH ACADEMIC AND SOCIAL METRICS
- REFLECT CHANGING INFLUENCE OF A WORK OVER TIME

Legge 112/2013

«2. I soggetti pubblici preposti all'erogazione o alla gestione dei finanziamenti della ricerca scientifica adottano, nella loro autonomia, le misure necessarie per la promozione dell'accesso aperto ai risultati della ricerca finanziata per una quota pari o superiore al 50 per cento con fondi pubblici, quando documentati in articoli pubblicati su periodici a carattere scientifico che abbiano almeno due uscite annue. I predetti articoli devono includere una scheda di progetto in cui siano menzionati tutti i soggetti che hanno concorso alla realizzazione degli stessi. L'accesso aperto si realizza:

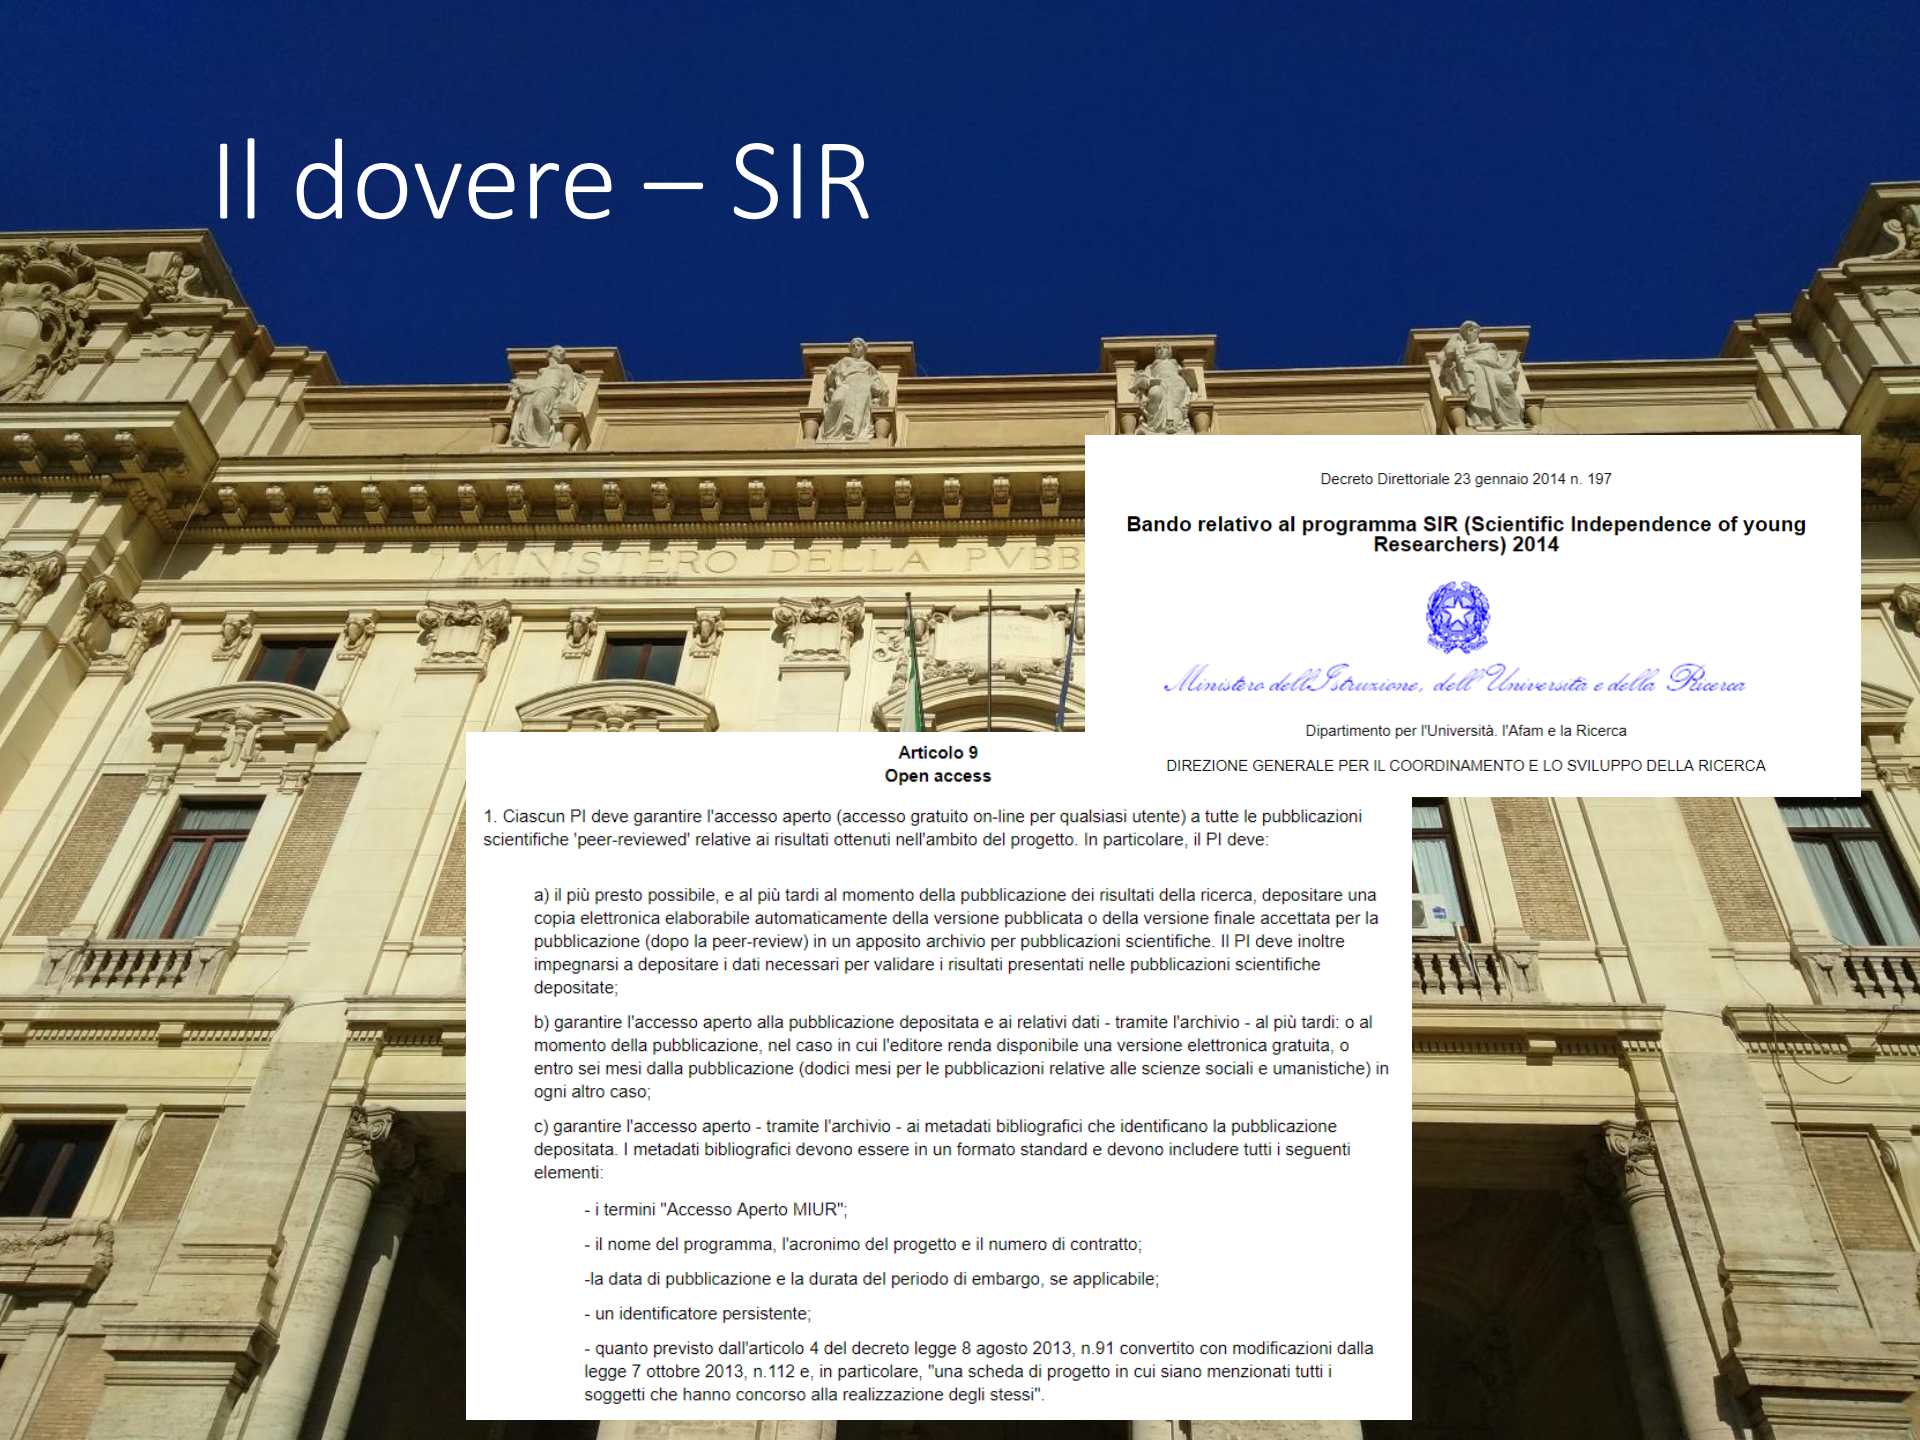

a) tramite la pubblicazione da parte dell'editore, al momento della prima pubblicazione, in modo tale che l'articolo sia accessibile a titolo gratuito dal luogo e nel momento scelti individualmente;

b) tramite la ripubblicazione senza fini di lucro in archivi elettronici istituzionali o disciplinari, secondo le stesse modalita', entro diciotto mesi dalla prima pubblicazione per le pubblicazioni delle aree disciplinari scientifico-tecnico-mediche e ventiquattro mesi per le aree disciplinari umanistiche e delle scienze sociali.

ARTICLE 29 — DISSEMINATION OF RESULTS — OPEN ACCESS — VISIBILITY OF EU FUNDING

ARTICLE 29 — DISSEMINATION OF RESULTS — OPEN ACCESS — VISIBILITY OF EU FUNDING

29.1 Obligation to disseminate results

Unless it goes against their legitimate interests, each beneficiary must — as soon as possible — '**disseminate**' its results by disclosing them to the public by appropriate means (other than those resulting from protecting or exploiting the results), including in scientific publications (in any medium).

29.2 Open access to scientific publications

Each beneficiary must ensure open access (free of charge, online access for any user) to all peer-reviewed scientific publications relating to its results.

In particular, it must:

(a) as soon as possible and at the latest on publication, deposit a machine-readable electronic copy of the published version or final peer-reviewed manuscript accepted for publication in a repository for scientific publications;

Moreover, the beneficiary must aim to deposit at the same time the research data needed to validate the results presented in the deposited scientific publications.

(b) ensure open access to the deposited publication — via the repository — at the latest:

(i) on publication, if an electronic version is available for free via the publisher, or

(ii) within six months of publication (twelve months for publications in the social sciences and

29.3 Open access to research data

***[OPTION 1 for actions participating in the open Research Data Pilot**: Regarding the digital research data generated in the action ('**data**'), the beneficiaries must:*

(a) deposit in a research data repository and take measures to make it possible for third parties to access, mine, exploit, reproduce and disseminate — free of charge for any user — the following:

(i) the data, including associated metadata, needed to validate the results presented in scientific publications as soon as possible;

*(ii) other data, including associated metadata, as specified and within the deadlines laid down in the '**data management plan**' (see Annex 1);*

Open Access – H2020 - testi

STEP 4 – **DEPOSITARE I DATI** SU CUI SI BASA L'ARTICOLO
- I DATI IN AMBIENTE DIGITALE SONO PARTE DELLA PUBBLICAZIONE
- FA PARTE DEL DATA PILOT (OPT OUT)

STEP 3 – **OPEN ACCESS AI METADATI (via OpenAIRE)**
- DEVONO COMPRENDERE GRANT NUMBER E ACRONIMO
- «EU» E «H2020»
- IDENTIFICATIVO PERSISTENTE

STEP 2 – **OPEN ACCESS**
- GREEN O GOLD
- MA ENTRO 6 MESI /12 MESI
- **SE EMBARGO SUPERIORE**, BISOGNA PUBBLICARE IN RIVISTA OPEN ACCESS [COSTI RIMBORSABILI, 6.2.D3]

STEP 1 – **DEPOSITO**
- FORMATO MACHINE READABLE
- AL MOMENTO DELL'ACCETTAZIONE
- **SEMPRE NECESSARIO**, ANCHE SE SI PUBBLICA IN RIVISTA OPEN ACCESS

Costi per la disseminazione

Annotated Model Grant Agreement 6.2.D3 (pag. 84)

D.3 **Costs of other goods and services** (including related duties, taxes and charges such as non-deduc value added tax (VAT) paid by the beneficiary) are eligible, if they are:

(a) purchased specifically for the action and in accordance with Article 10.1.1 or

1. Costs of other goods and services (D.3): Types of costs — Form — Eligibili conditions — Calculation

The budget category applies to all RIA, IA and CSA grants under the General MGA.

The additional c
Article 16 and o
research infrastr

Open access — Costs related to open access to peer-reviewed scientific publications and research data are eligible, if the eligibility conditions are fulfilled. With explicit agreement by the Commission/Agency, it can also include fees levied for a membership scheme (if this is a requirement for publishing in open access or if membership is a pre-condition for significantly lower article processing charges).

1.1 What? This
the action (or contributed in-kind against payment), including:

- costs for consumables and supplies *(e.g. raw materials etc.)*
- dissemination costs (including regarding open access to peer-reviewed scientific publications, *e.g. article processing or equivalent charges*, costs related to open access to research data and related costs, *such as data maintenance or storage and conference fees for presenting project-related research*)
- costs related to intellectual property rights (IPR) (including costs to protect the results or royalties paid for access rights needed to implement the action)

http://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/amga/h2020-amga_en.pdf#page=89

Costi per la disseminazione

Annotated Model Grant Agreement
Art. 29.2
(pag. 246)

In gold open access, the payment of publication costs (article processing charges) is shifted from readers' subscriptions to (generally one-off) payments by the author. Such author processing costs may be eligible *(see Article 6.2.D.3)* — if incurred before the end of the action. Currently, an action for dealing with such costs incurred after the end of the action in FP7 is being piloted and further action in H2020 will be considered based on the outcome.

⚠ Although gold open access already ensures access via the publisher, the beneficiaries must nevertheless also provide open access via a repository *(see below)* in order to ensure the long-term preservation and availability of the publication.

I COSTI DEVONO ESSERE SOSTENUTI NEL CORSO DEL PROGETTO
(PRIMA DELLA FINE)

Open data – H2020

GRANT AGREEMENT
ART. 29.3
pag. 248

https://goo.gl/sryNTg

3. Open access to research data (Extended Open Research Data Pilot)

What?

Beneficiaries of actions that participate in the Open Research Data Pilot must give **open, free-of-charge access** to the end-user to **digital research data** generated during the action (⚠ new in Horizon 2020).

⚠ As of the Work Programme 2017, the Open Research Data pilot has been extended to all thematic areas of Horizon 2020 (except ERC PoC actions, SME instrument Ph1 actions, ERA-NET Cofund actions that do not produce data, EJP Cofund actions, and prizes).

Participation is therefore now in principle **the default**. However, actions may **opt out** at any stage — both before signing the GA and afterwards (through an amendment; *see Article 55*) —, if:

- participation is incompatible with the obligation to protect results *(see Article 27)*
- participation is incompatible with the security obligations *(see Article 37)*
- participation is incompatible with rules on protection of personal data
- participation would mean that the project's main aim might not be achieved
- the project will not generate/collect any research data or
- there are other legitimate reasons not to take part.

- PROGETTO PILOTA **ESTESO NEL 2017 A TUTTE LE AREE**
- - CLAUSOLE DI OPT OUT

PRINCIPIO: **«AS OPEN AS POSSIBLE, AS CLOSED AS NECESSARY»**

Open data – H2020

https://goo.gl/sryNTg

'Digital research data' is information in digital form (in particular facts or numbers), collected to be examined and used as a basis for reasoning, discussion or calculation; this includes statistics, results of experiments, measurements, observations resulting from fieldwork, survey results, interview recordings and images.

Only data that is generated digitally *in the action* is concerned. Actions are encouraged to digitise any other data and provide open access to it, but they are not obliged to do so.

The pilot applies to **2 types** of digital research **data**:

- the data needed to validate the results presented in scientific publications and associated metadata (i.e. data describing the deposited research data) and
- other data and associated metadata, as specified by the beneficiaries themselves in their data management plan.

Open access to research data means taking measures to make it possible for third parties to **access, mine, exploit, reproduce** and **disseminate** data — via a research data repository.

A 'research data repository' means an online archive for research data; this can be subject-based/thematic, institutional or centralised.

Best practice: Useful listings of repositories include the Registry of Research Data Repositories (Re3data) and Databib. One key entry point for accessing and depositing related data and tools is Zenodo.

- DATI CHE VALIDANO I RISULTATI PUBBLICATI
- OGNI ALTRO DATO UTILE
- DEVE ESSERE POSSIBILE ACCESSO, TDM, SFRUTTAMENTO, RIPRODUZIONE

Open data – H2020

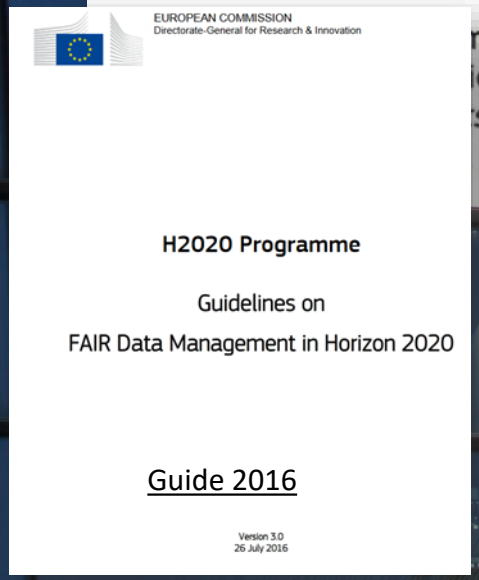

https://goo.gl/sryNTg

Actions participating in the pilot must draw up a **data management plan (DMP)** within the first 6 months of the project implementation.

The data management plan must support the management life-cycle for all data that will be collected, processed or generated by the action. It must cover how to make data findable, accessible, interoperable and re-usable (FAIR), including:

- the handling of data during and after the project
- what data will be collected, processed or generated
- what methodology and standards will be applied
- whether data will be shared / made open access (and how) and, if any, what data will not be shared / made open access (and why)
- how data will be curated and preserved.

…nent plan should be updated (and become more precise) as the project …ions should be created whenever important changes to the project occur …s, *changes in consortium policies, etc.),* at least as part of the mid-term … at the end of the project.

nsition at the institutional level, we suggest universities should develop

transition will take years to effect, not months or days. To
a programme of cultural change, which is necessary t

… Open Science made easy…

OPEN SCIENCE MADE EASY

7 steps towards transparent and reproducible research

1. Create your own OSF account

Open Science Framework: (one possible) online platform to document and present your research process transparently

- Go to https://osf.io/
- Register: name, email, password
- Create new project: 'My Projects' ➜ 'Create project' ➜ Insert title ➜ 'Create'
- The URL of the project will not be changed ➜ can be referenced in your paper
- The account can be used for all the following aspects of Open Science (OS)
- When you are ready: Change project status from *private* to *public*

2. Pre-register your own studies

Describe your hypotheses, methods and analyses before running the study in your pre-registration

- In OSF: 'Project overview' – 'registrations' – 'New registration'
- Choose and complete a template
- Make it public immediately or use the embargo (up to 4 years) to postpone public access.
- Pre-registrations can …
  - be brief or very detailed
  - be made before/during/after data collection
  - include confirmatory, but also exploratory and open research questions

3. Open Materials

Make methods and materials transparent and availablev

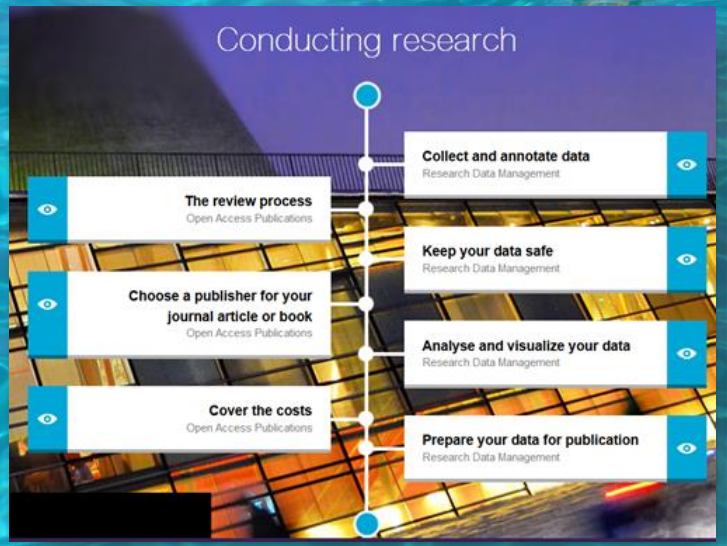

- Upload documents describing all processes, methods and variables to your OSF project
- Add the OSF link in your paper
- Basic lists as well as detailed code books are feasible
- If possible upload the original questionnaires (be cautious with copyrighted materials!)

4. Open Data

Make your research data publicly available

- Notify your participants in the informed consent form
- Make all primary data available that is necessary to reproduce your results
- Guarantee anonymity (if necessary delete variables, collapse, …)
- Prepare your code book
- Upload your data files and code book to the OSF project, add the link in your paper
- Make your data citable (doi)
- Cf. the DGPs recommendation for open data sharing: http://bit.ly/dgpsdata_en

FOSTER About Resources Events Courses News

Open Science Training Courses

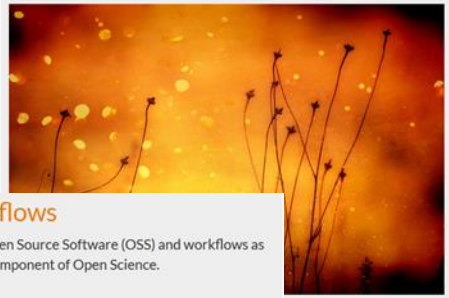

What is Open Science?

This introductory course will help you to understand what open science is and why it is something you should care about.

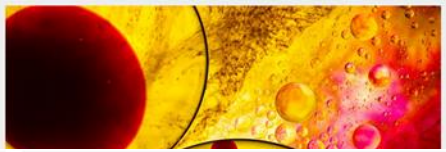

Best Practices

This course introduces funding body policies and other environmental factors that influence good practice in opening up research practice.

Managing and Sharing Research Data

In this course, you'll focus on which data you can share and how you can go about doing this most effectively.

OSS and Workflows

This course introduces Open Source Software (OSS) and workflows as an emerging but critical component of Open Science.

Data Protection and Ethics

This course helps you to get to grips with responsible data sharing.

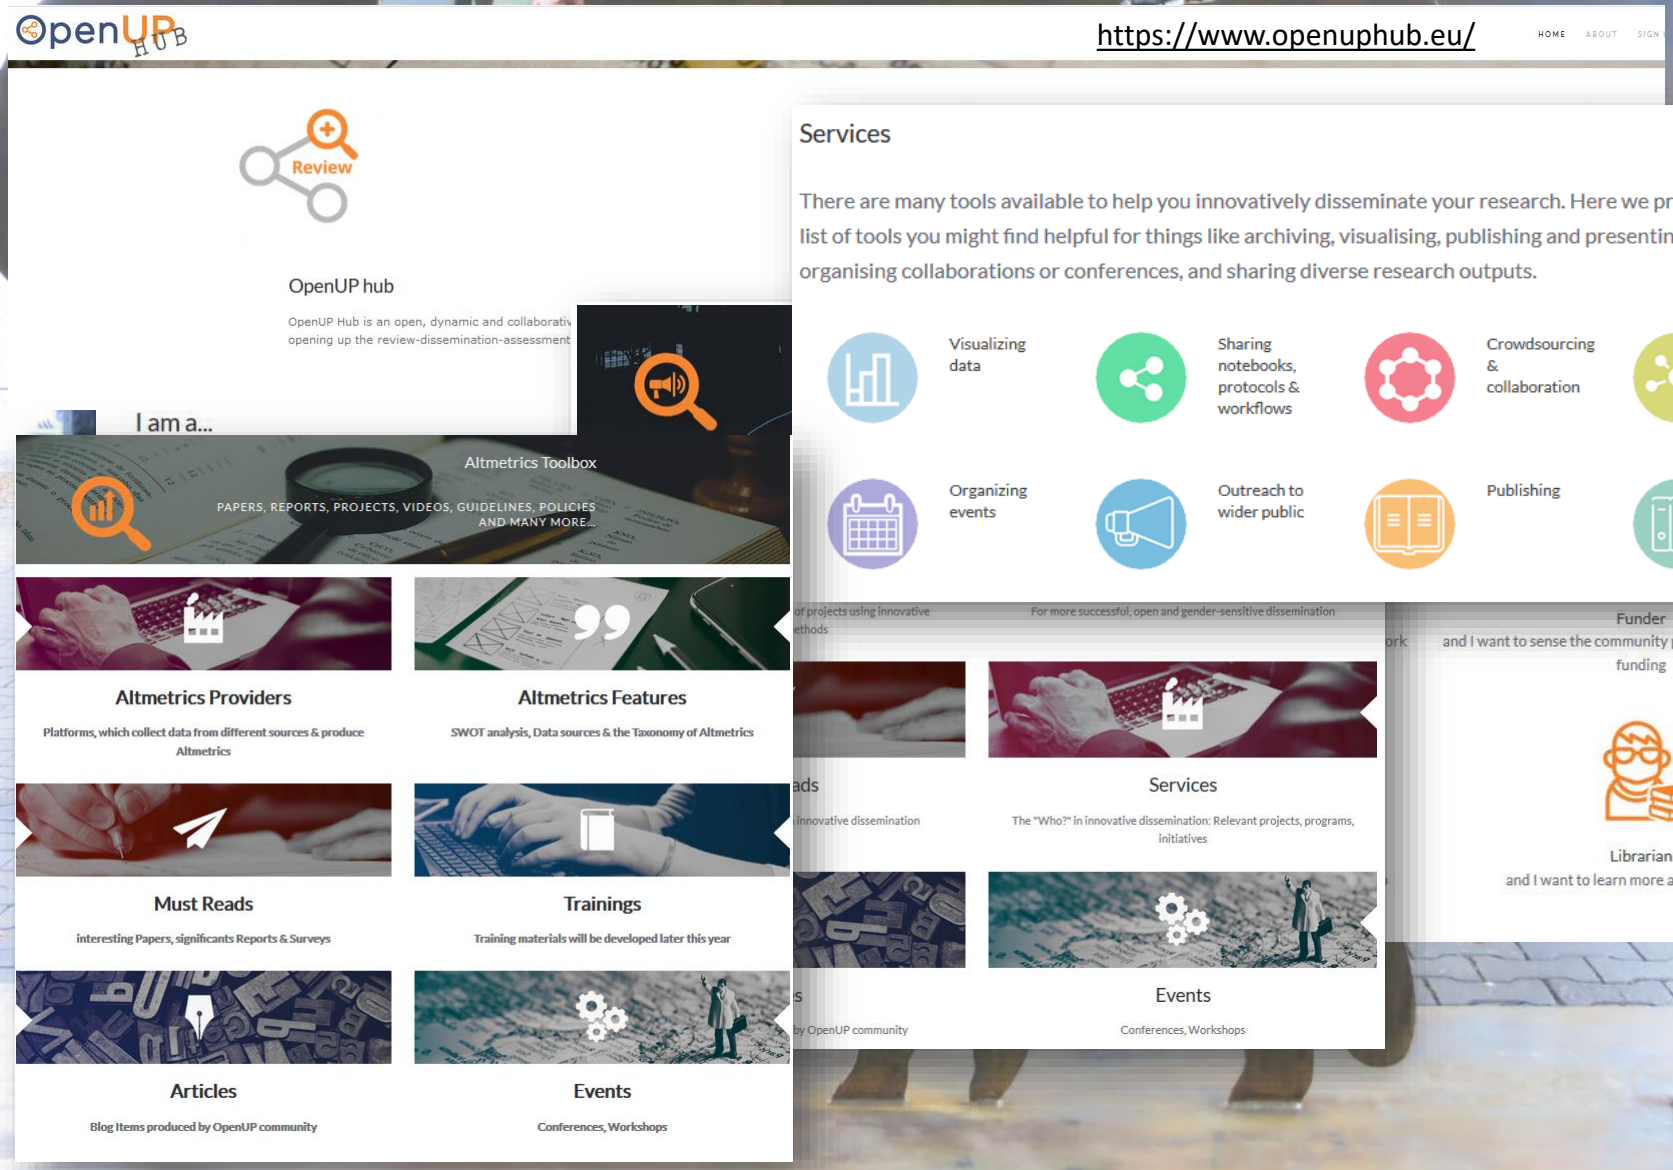

Licensing

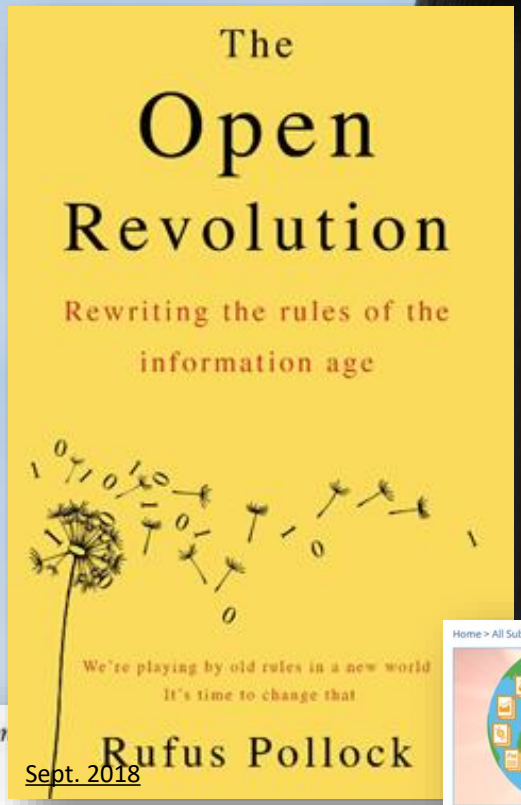

This course helps you to find the best license for your open research outputs.

- etc.

Many of us enable the sharing of research either directl
diverse set of parties who provide the systems on whic
communicated, critiqued, and evaluated.

We do it in different ways. We do it from any number of places and projects (varying widely in function, size, organizational and business model).

Our commonalities:

1. Shared problems
2. Shared language of research communication
3. Shared values and shared challenges in our work

Too often, another commonality is the experience of frustration with the seeming lack of progress. But above all, what draws us together is the common interest to improve the research enterprise at large.

Programma

Open Science Webinar Series 2018

Serie 1

1.1 Open Science e Politiche Europee sulle Pubblicazioni
Data e ora: 17/10/2018 ore 10.30-11.30
Agenda:
10.30-10:35: Introduzione
10.35-11-05: Presentazione a cura di Emma Lazzeri ed Elena Giglia
11.05-11:30: Domande dei partecipanti
Registrazione: Registratevi a questo link.
Il modulo per la registrazione per questo webinar verrà chiuso martedì 16 ottobre alle ore 17.00.

Serie 2

2.1 Research Data Management e Politiche Europee sui Dati
Data e ora: 15/11/2018 ore 12.00-13.00
Registrazione: Sarà possibile registrarsi nelle settimane precedenti la data del webinar su questa pagina.

2.2 FAIR data e action plan
Data e ora: 20/11/2018 ore 12.00-13.00
Registrazione: Sarà possibile registrarsi nelle settimane precedenti la data del webinar su questa pagina.

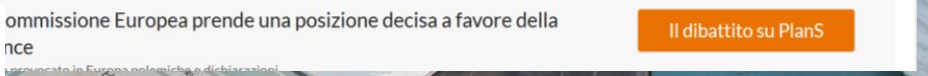

2.3 Data Management Plan e strumenti pratici
Data e ora: 28/11/2018 ore 14.30-15.30
Registrazione: Sarà possibile registrarsi nelle settimane precedenti la data del webinar su questa pagina.

Serie 3

3.1 Data Literacy
In programma nel 2019

3.2 Open Science Policies
In programma nel 2019

https://www.rd-alliance.org/group/rda-italy/wiki/open-science-webinar-series-2018
