

## **OpenAIRE National workshop**

**Torino, December 10th, 2018**

---

### **The view of an Open Science infrastructure**

OpenAIRE is the infrastructure for monitoring and verification of Open Access policies funded by the European Commission since 2009. OpenAIRE links projects to research results (publications, data, software, etc.).

As of today, OpenAIRE serves 16 funding bodies in Europe and around the world, offering Open Science support through the National Open Access Desk (NOADs) network.

Through its services the infrastructure allows to realize open access to the research results and increase their visibility and reuse.

Specific tools are available for funders, institutions, project managers, researchers and repository managers.
