The Open Science Impact on Knowledge Exchange

Open Science describes a way of working which makes research more inclusive, more collaborative and more transparent. The Open Science principles are changing the way science is communicated and impacting several aspects of the information system supporting research. This presentation wants to offer insights on how Elsevier supports these Open Science principles and how embeds them in its roadmap for product development, co-creation and collaboration with external partners. Particular attention will be given to initiatives that contributes to the development of a FAIR and Open Data ecosystem.
